Immunisation for adults pre-dialysis, on dialysis or pre-/post-kidney transplant

- Whenever possible vaccinations should be given prior to transplantation or commencing dialysis.
- The administration of non-live vaccines should not delay the transplant process. The administration of live vaccines is contraindicated during the 4 weeks before transplant. If a patient is active on the deceased donor list and requires a live vaccine – suspend them from list for 4 weeks post-vaccination. The administration of live vaccines is also contraindicated post-transplant.
- Pre-transplant includes – in transplant work-up, waiting for live donor transplant, or on deceased donor list.

For children aged under 18 years, please refer to the Starship Clinical Guideline Renal vaccination record for paediatric CKD.

| **Influenza (Influvac Tetra)** | • Annually, during the funded Influenza Immunisation Programme  
• Two doses are recommended in the first year post-transplant but only the first dose is funded | Pre-dialysis, on dialysis, pre-transplant  
• Administer one dose annually\(^a\)  
Post-transplant  
• Wait until 3 months post-transplant unless at high-risk of infection:  
• If at high risk of infection, e.g. during influenza epidemic, wait until 1 month post-transplant  
• Administer one funded dose annually\(^b\)  
• In the first year post-transplant a second purchased influenza vaccination can be administered 4 weeks later to maximise the person’s immune response to the vaccine  
• In subsequent years only one dose is required annually | FUNDED | FUNDED | FUNDED | FUNDED |
| **Hepatitis A (Havrix\(^a\))** | • Give on the advice of renal specialist or transplant team | Pre-dialysis (Engerix-B 20mcg)  
• Administer three doses at 0, 1, 6 month intervals  
On dialysis, pre-transplant, post-transplant (HBvaxPRO 40mcg)  
• Administer three doses at 0, 1, 6 month intervals  
If accelerated schedule requested by specialist or transplant team pre-transplant e.g. active on deceased donor list (HBvaxPRO 40mcg)  
• Administer three doses at 0, 1, 2 month intervals | Recommended NOT funded | FUNDED | FUNDED | FUNDED |

**Footnote**

\(^a\) Influenza vaccination is recommended but not funded for household and other close contacts of pre-dialysis, dialysis, pre- and post-transplant patients.

up to 64 years | Recommended  
NOT funded  
up to 64 years | CONTRAINDIANTED from 4 weeks pre-transplant | CONTRAINDIANTED |

### Footnotes

a. Patients who have received immunoglobulin or other blood products may require time for passive antibodies to decrease prior to administration of live varicella and MMR vaccines. Refer to Table A6.1: Suggested intervals between immunoglobulin product administration or blood transfusion and MMR or varicella vaccination in the Immunisation Handbook 2017 2nd Edition.

b. Two or more live vaccines can be given at the same visit. However, when live vaccines are administered at different visits, a minimum interval of 4 weeks is required.

c. Funded up to 4 weeks pre-transplant. Live vaccines should not be given in the 4 weeks prior to transplant. If a patient is active on the deceased donor list and requires a live vaccine, suspend them from list for 4 weeks post-vaccination.

d. Two doses of varicella vaccine are funded for a household contact of a pre- or post-transplant patient who is not immune to varicella, where the household contact has no clinical history of varicella infection or immunisation.
